

Astro Bounty – Manual

Game description:

Astro Bounty is a 2D space shooter where your typing abilities are your weapon. Pilot a single spaceship and defend against waves of aggressive enemies by typing the words that are visible below them. There are two kinds of enemies to destroy:

- **Chargers:** Such enemies rush against you, trying to crash into your ship.
- **Shooters:** These foes fire projectiles from afar.

As you kill enemies, you'll be able to collect one of two powerful upgrades:

- **Shield Power-Up:** Grants temporary invincibility, destroying any enemy that touches you for a few precious seconds.
- **Instant Kill Power-Up:** Unleashes an explosion, annihilating four random enemies on the screen.

After surviving through increasingly challenging waves of enemies, get ready for the final fight, a challenging boss battle. Defeating it will allow you to claim victory.

Game installation:

1. Download the zip file.
2. Extract it into a folder.
3. Open `astro_bounty.exe` to play the game.

Playing instructions:

When you launch the game, you'll be greeted by a main menu offering two options: "Start" and "Guide". The Guide provides clear instructions on how to play, while Start launches you straight into the action.

After starting the game, players can use horizontal arrows to move the ship, it is useful to dodge enemy projectiles and grab powerups. Each enemy will have a word below it, and by typing it the enemy will be destroyed, having a 10% chance of dropping one of two powerups. The shield one will make you invulnerable for 10 seconds and the explosion one will kill 4 random enemies.

As you survive, you'll face 10 increasingly difficult waves of enemies, each more relentless than the last and finally then, the final boss will spawn, trying to shoot you down. In this phase dodging will be most crucial.
